

Beyond the Blueprints:

The Alchemy of Spices, Songs, and Hydrogen Reduction

Dmytro Fedorov, *PhD of Technical Sciences in Hydrogen Reduction Processes*

Prelude

As engineers and doctors of technical science, we are trained to speak the language of precision. We understand the world through diagrams, algorithms, and technical specifications. But having spent six consecutive years directly in India and maintaining a thirty-years professional dialogue with my Indian colleagues, I have grasped a profound truth: the strongest bridges are never built from steel or concrete. They are built from stories, melodies, and shared aromas around a welcoming table.

After-Work Communication

In the intense environment of international technical projects, one might expect late evening conversations to continue troubleshooting or process optimization. Yet my experience has been different. Once the working day was over, technical jargon receded, giving way to something far deeper. We never argued about the kinetics or diffusion of hydrogen reduction — we discussed the historical echoes of our ancestors. We did not debate experimental data — we sang songs.

It was during these “off-duty” hours that the true Indo-Ukrainian dialogue began. We discovered that Ukrainian folk song and Indian raga resonate on the same emotional frequency — in both lives the longing for one’s homeland and the triumph of the human spirit.

A Meeting of Flavors

There is a special alchemy in the meeting of two vibrant cultures. When the sincere, soul-warming hospitality of Ukrainian cuisine met the bold, refined spices of India — it was no longer simply a meal, it was a negotiation of trust. It was the realization that while our technical methods may be universal, it is the cultural nuances that give a partnership its true “flavor.” This journal — the Indo-Ukrainian Humanitarian Review — was born from those shared kitchen evenings under Indian stars on tropical nights.

Our Mission: Diamond Open Access

This platform is our “engineering table” for the next generation. We have chosen the **Diamond Open Access** model, guaranteeing that this intellectual exchange will not be tainted by commercial interests. It is a gift of knowledge — **free for young authors and free for readers worldwide.**

Conclusion

We invite young people, scholars, and dreamers to join us. Let us view Indo-Ukrainian relations not through the lens of contracts and war in the Persian Gulf (spring 2026), but through the vibrant colors of our shared humanity. Welcome to a space where precision is in harmony with passion.
